### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 26 November 2001.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.

### **DETAILED ACTION**

Acknowledgement is made of the Abstract filed 10/04/01, the IDS filed 11/26/01 and the Priority documents filed 11/26/01.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1, 6, 8, 11 and 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "includes" in claims 1, 6, 8, 11 and 12 is a relative term, which renders the claim indefinite. The term "includes" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. The term is indefinite because it is unclear and confusing as to whether the limitation is a requirement or whether it is exemplary in scope.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 1615

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Howard (US Pat. No. 4,335,116).

Howard teaches a method for preparing stable trace element solutions for parenteral administration to livestock animals comprising the use of at least two organic water-soluble metal-ion-complexing agents, EDTA and glycine (see entire reference). The metal compounds taught are zinc, copper, manganese, chromium and selenium. The instantly claimed invention pertains to a method of preparing a trace element solution, providing a mixture of an EDTA-complex with a sodium selenite solution. The prior art discloses such a method for preparing mineral, nutritive supplement solutions wherein salts of zinc, copper, manganese and chromium are complexed with ethylenedinitrilotetraacetic acid (EDTA) and admixed with a selenium glycine complex. The only difference between the prior art and the instant claims is that the prior art teaches complex solutions that are made individually and may require more time in processing the formulation. There is ample motivation provided by the prior art to use EDTA with a selenium solution to help maintain and restore mineral deficiencies in animals, particularly livestock. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use the method of Howard, who teaches an EDTA-selenium complex, with the expected result of obtaining a suitable trace element solution effective for maintaining and restoring normal growth and development in livestock animals.
